

Spot the sub-standard cable?

The answer is they both are. Defective cable can't always be spotted by the untrained eye and even then many go unchecked unless subjected to routine tests as part of an installation process.

Still confident about your cable choice?

To be sure only specify cable that has independent third party approval.

The Approved Cables Initiative (ACI) is an industry-wide campaign set up with regulator support to educate and inform the cable supply industry and other stakeholders of problems encountered with sub-standard, defective and unsafe data, telecom and electric cable.
